Surveying
Planning

Completion Date
2008 - Current

Key Personnel
Steven D. Nasland, PE;
Principal-In-Charge

Bill Moser, PE; Quality
Control Manager

Greg Kump, PE; Project
Manager

Project Summary

The San Diego Community College District retained Nasland Engineering to provide general planning, engineering and surveying services for their Mesa College Campus. The initial services included the preparation of a Utility Master Plan for the Campus that corresponds to their current Campus Master Plan for site development through 2015.

The scope of this phase of work included documenting existing site utilities and the preparation of the Utility Master Plan to recommend modifications and upgrades to the existing sewer, water, storm drain, gas, electric and telecommunications systems. Discussions regarding stormwater management are provided. Project specific recommendations for stormwater treatment, and particularly low impact development (LID) features, would be provided as each phase of construction comes on line.
